

Next Generation Embedded Systems: Design, Integration and Validation Challenges

Tamás Dabóczy, **András Pataricza**, György Strausz and
Dániel Varró

**Budapest University of Technology and Economics
Department of Measurement and Information Systems**

Technology drivers in modern ES

🐉 Functionality vs. implementation

- Dominated by programming over a platform
 - Hardware programming: e.g. FPGA

🐉 Flexibility in functionality

- Integrability
 - Capability based
 - Service oriented system composition
 - Semantic capability description- ontology styled modeling
- Run-time deployment/reconfiguration
 - RT-virtualization
 - Numerous commercial and open-source systems

🐉 Flexibility in system topology

- Wireless/mobile communication
- M2M

🐉 Model based design

- Run-time design/reconfigurability

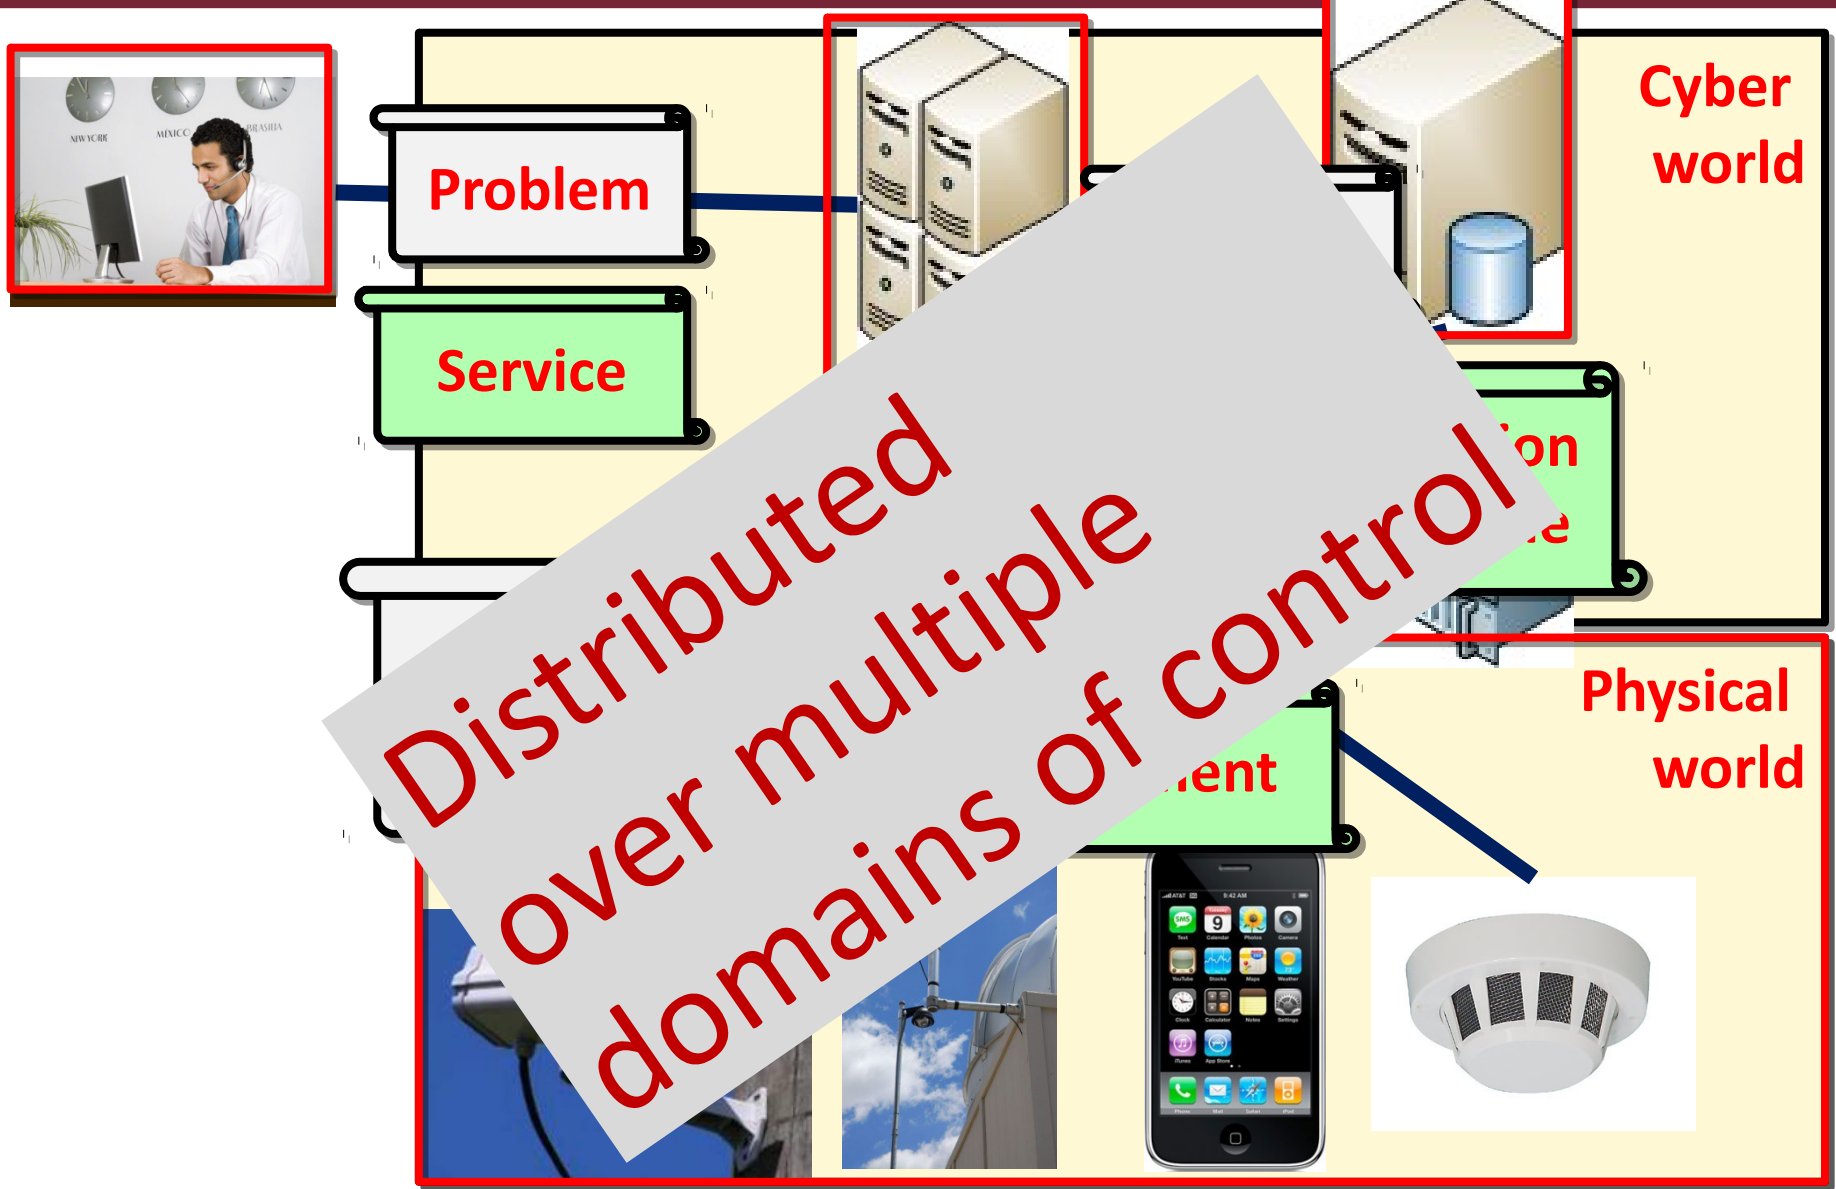

Cyber-physical system (CPS)

WIKIPEDIA
The Free Encyclopedia

- Computational and physical elements.
- Combination & coordination between
- ❖ Significant computational resources
 - processing capability, local storage + cloud
- ❖ Multiple sensory input/output devices
 - cameras, GPS chips, light sensors, proximity sensors
- ❖ Multiple communication mechanisms
 - WiFi, 3G, EDGE, Bluetooth, Zigbee
- ❖ High-level/MDD/DSL programming languages
 - enable rapid development of mobile CPS node SW

MDA in embedded systems design

ARTEMIS SRA: ruling over complexity needs MDA

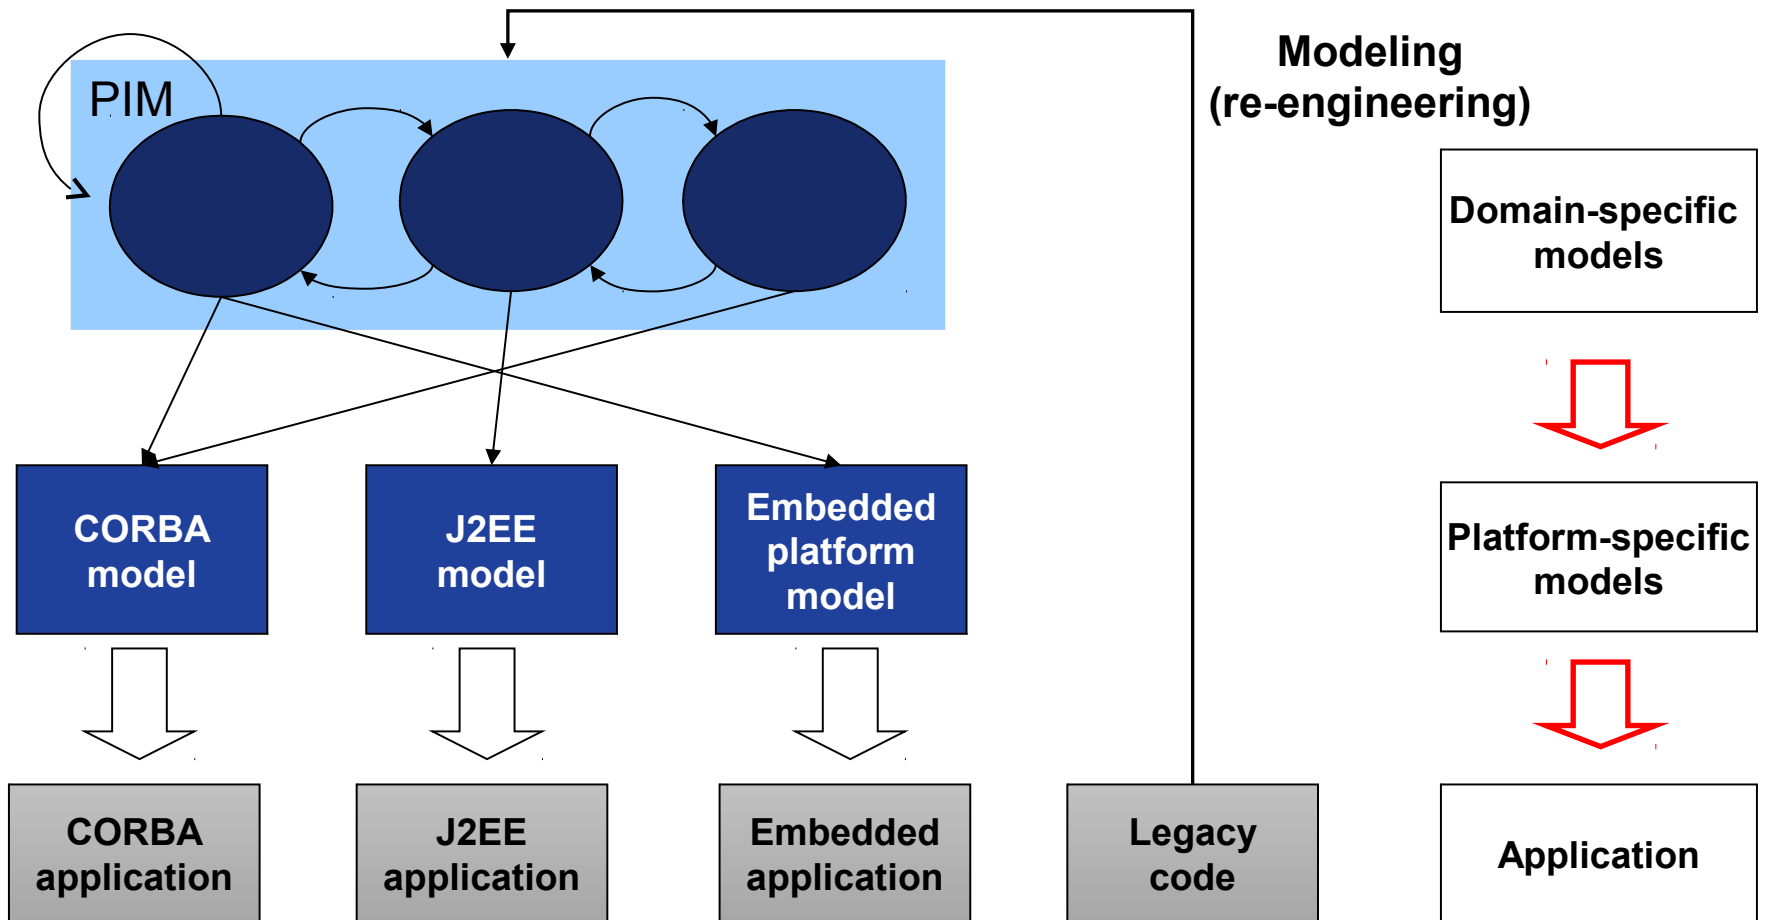

Critical system design and challenges

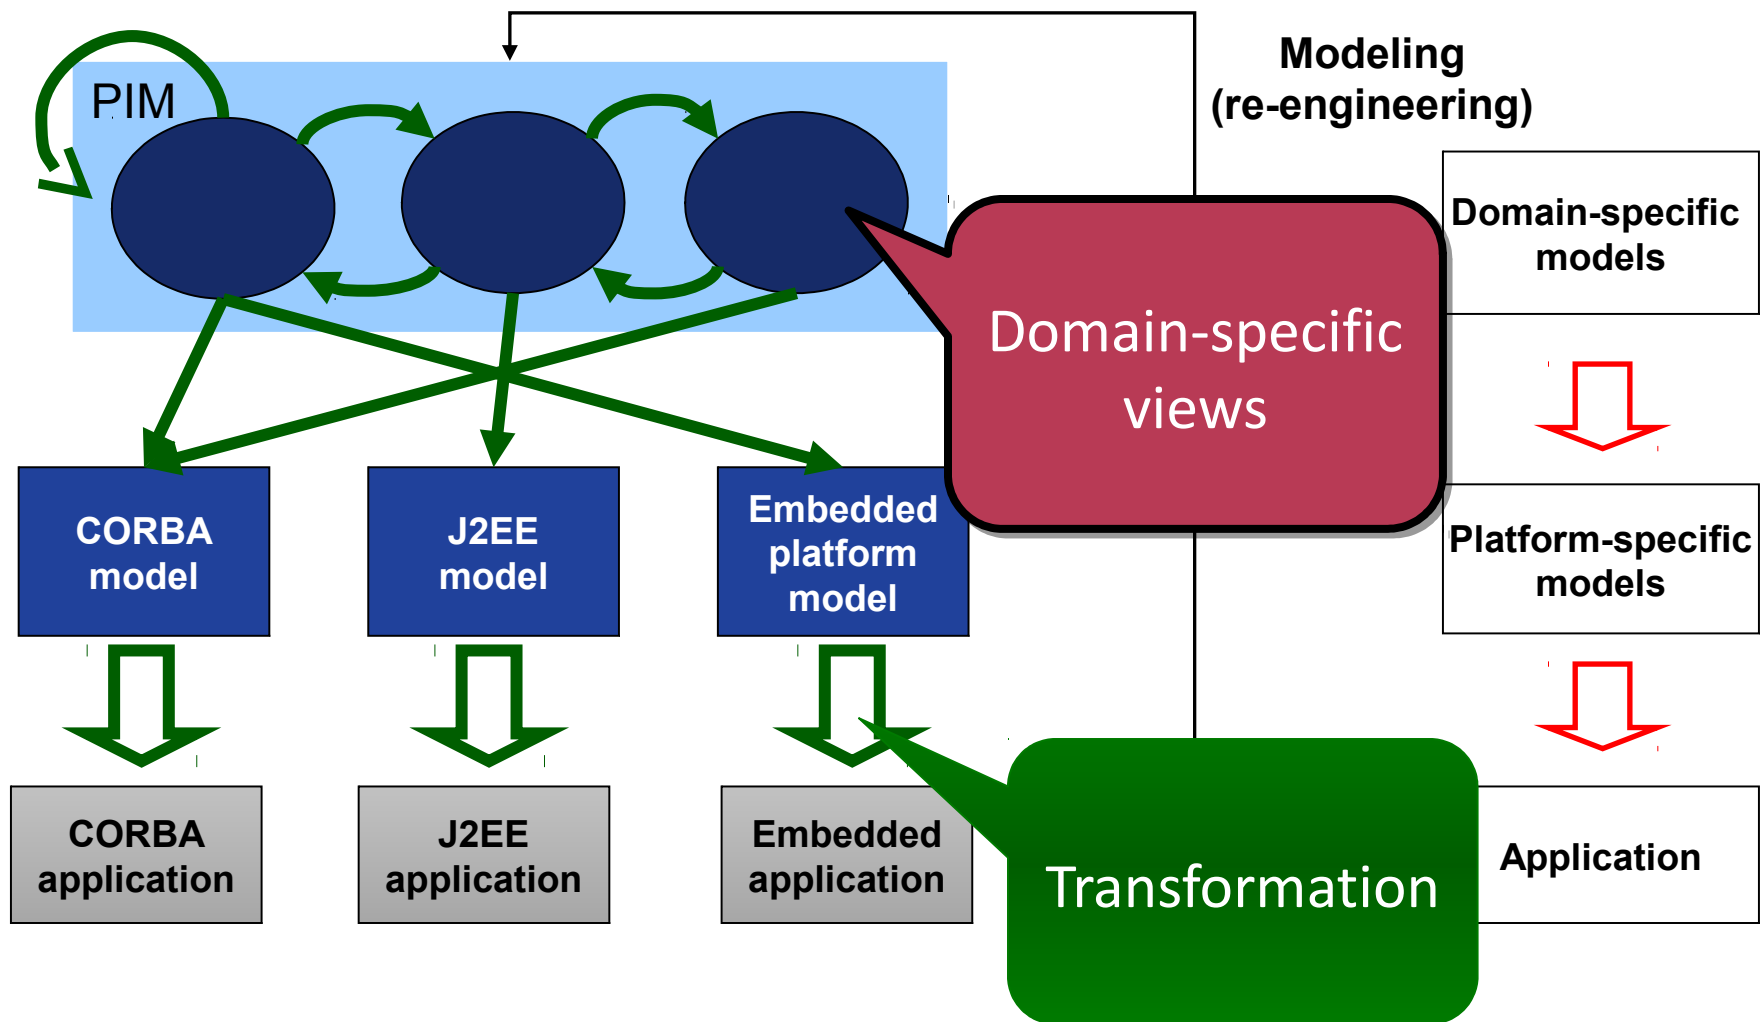

MDA for embedded systems

MDA, DSM in practice

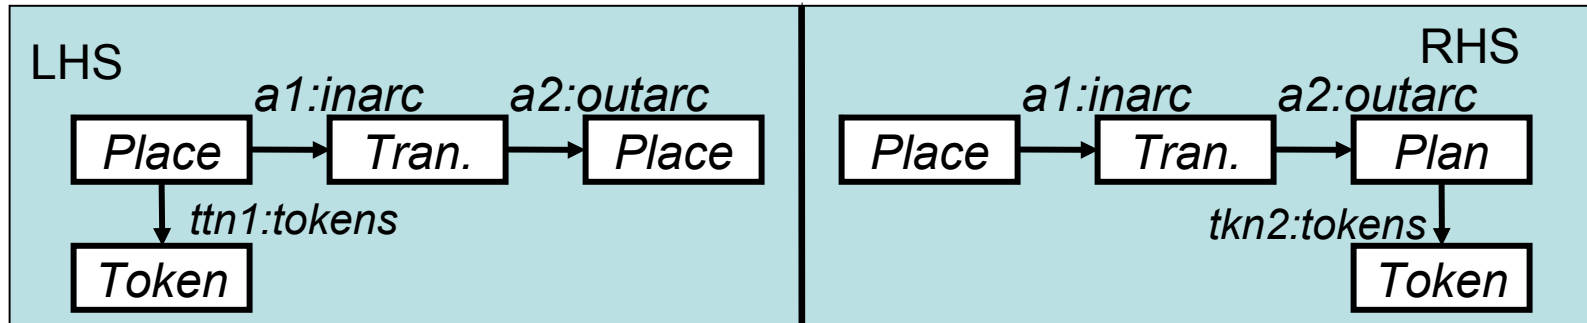

MDA, DSM in practice

Metamodeling

Graph Transformation

Phases of GT matching

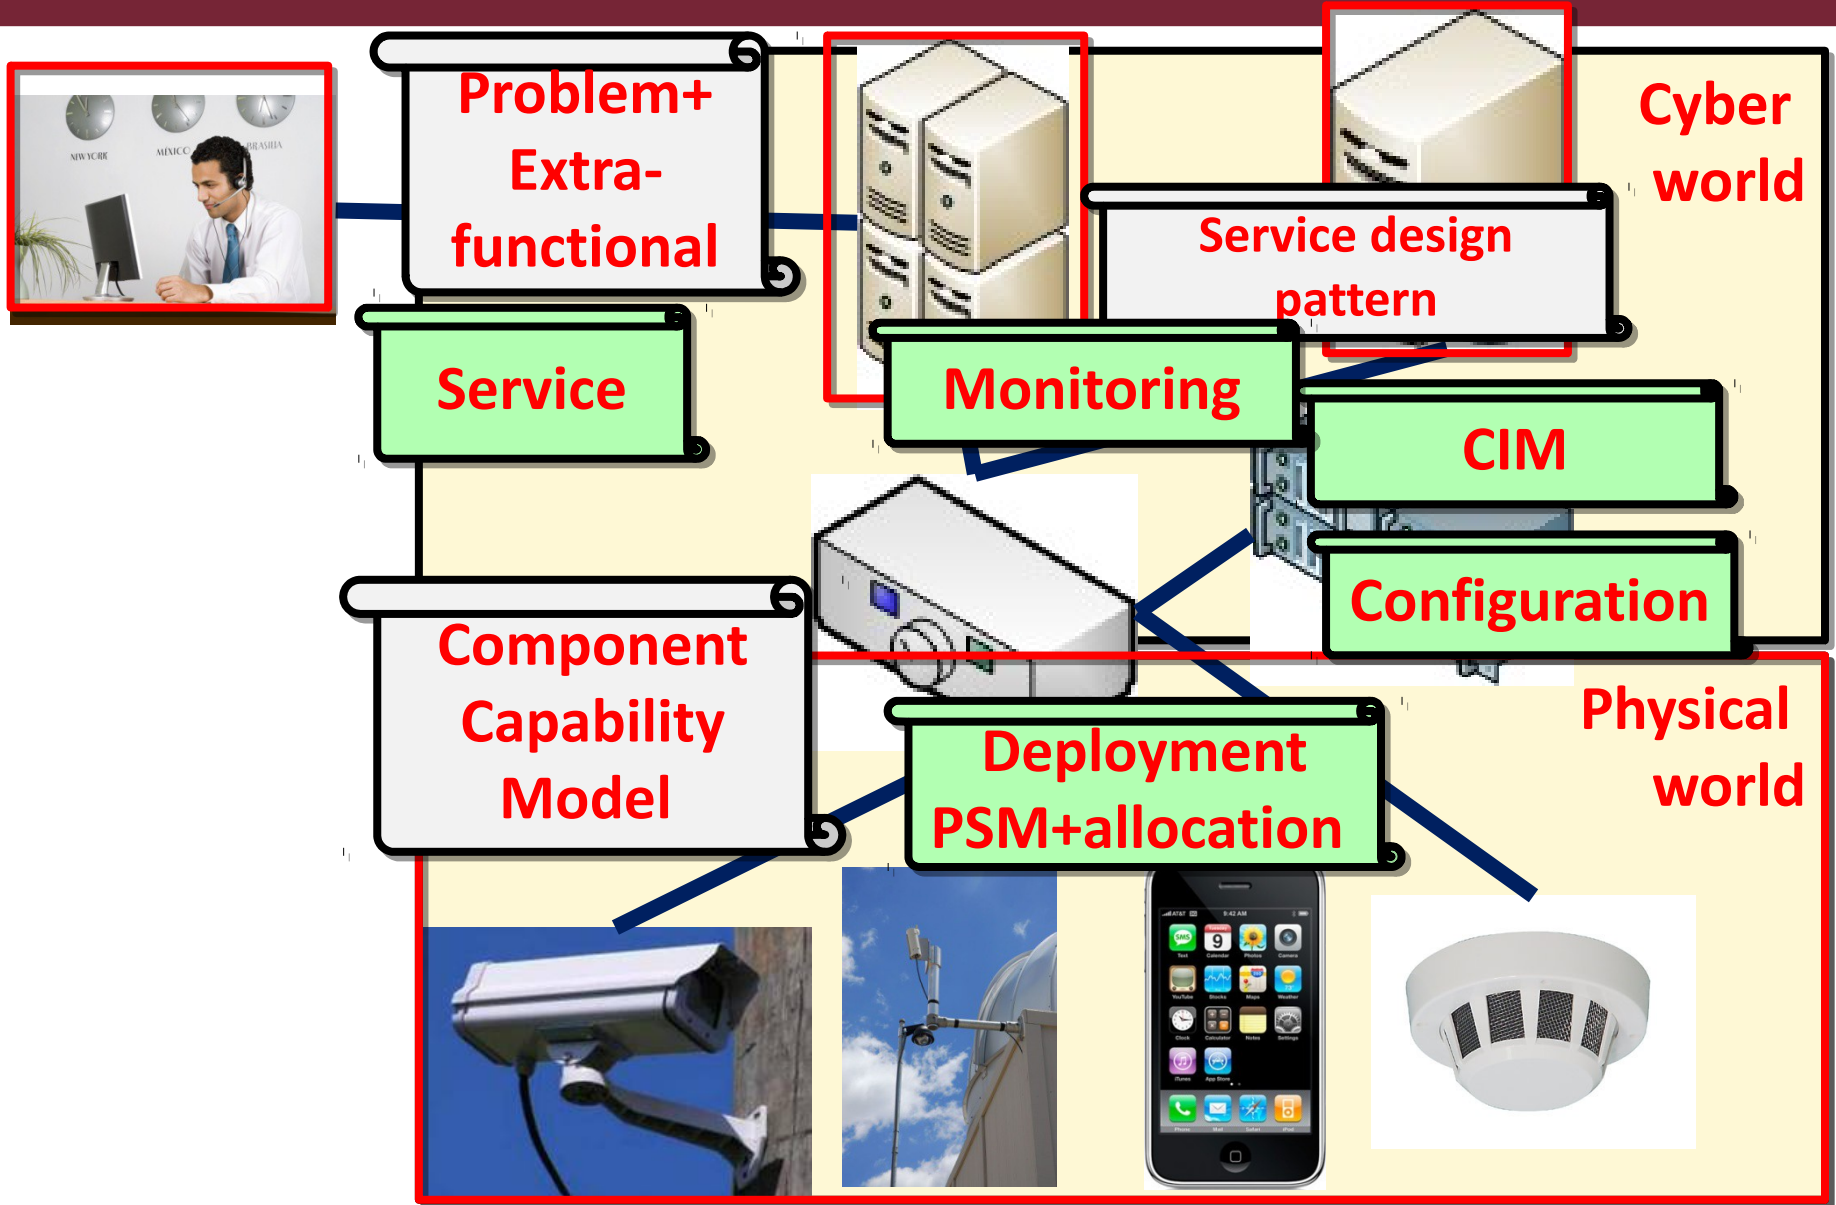

- Pattern Matching phase
- Updating phase: delete+ create

Pattern Matching is the **most critical issue** from **performance** viewpoint

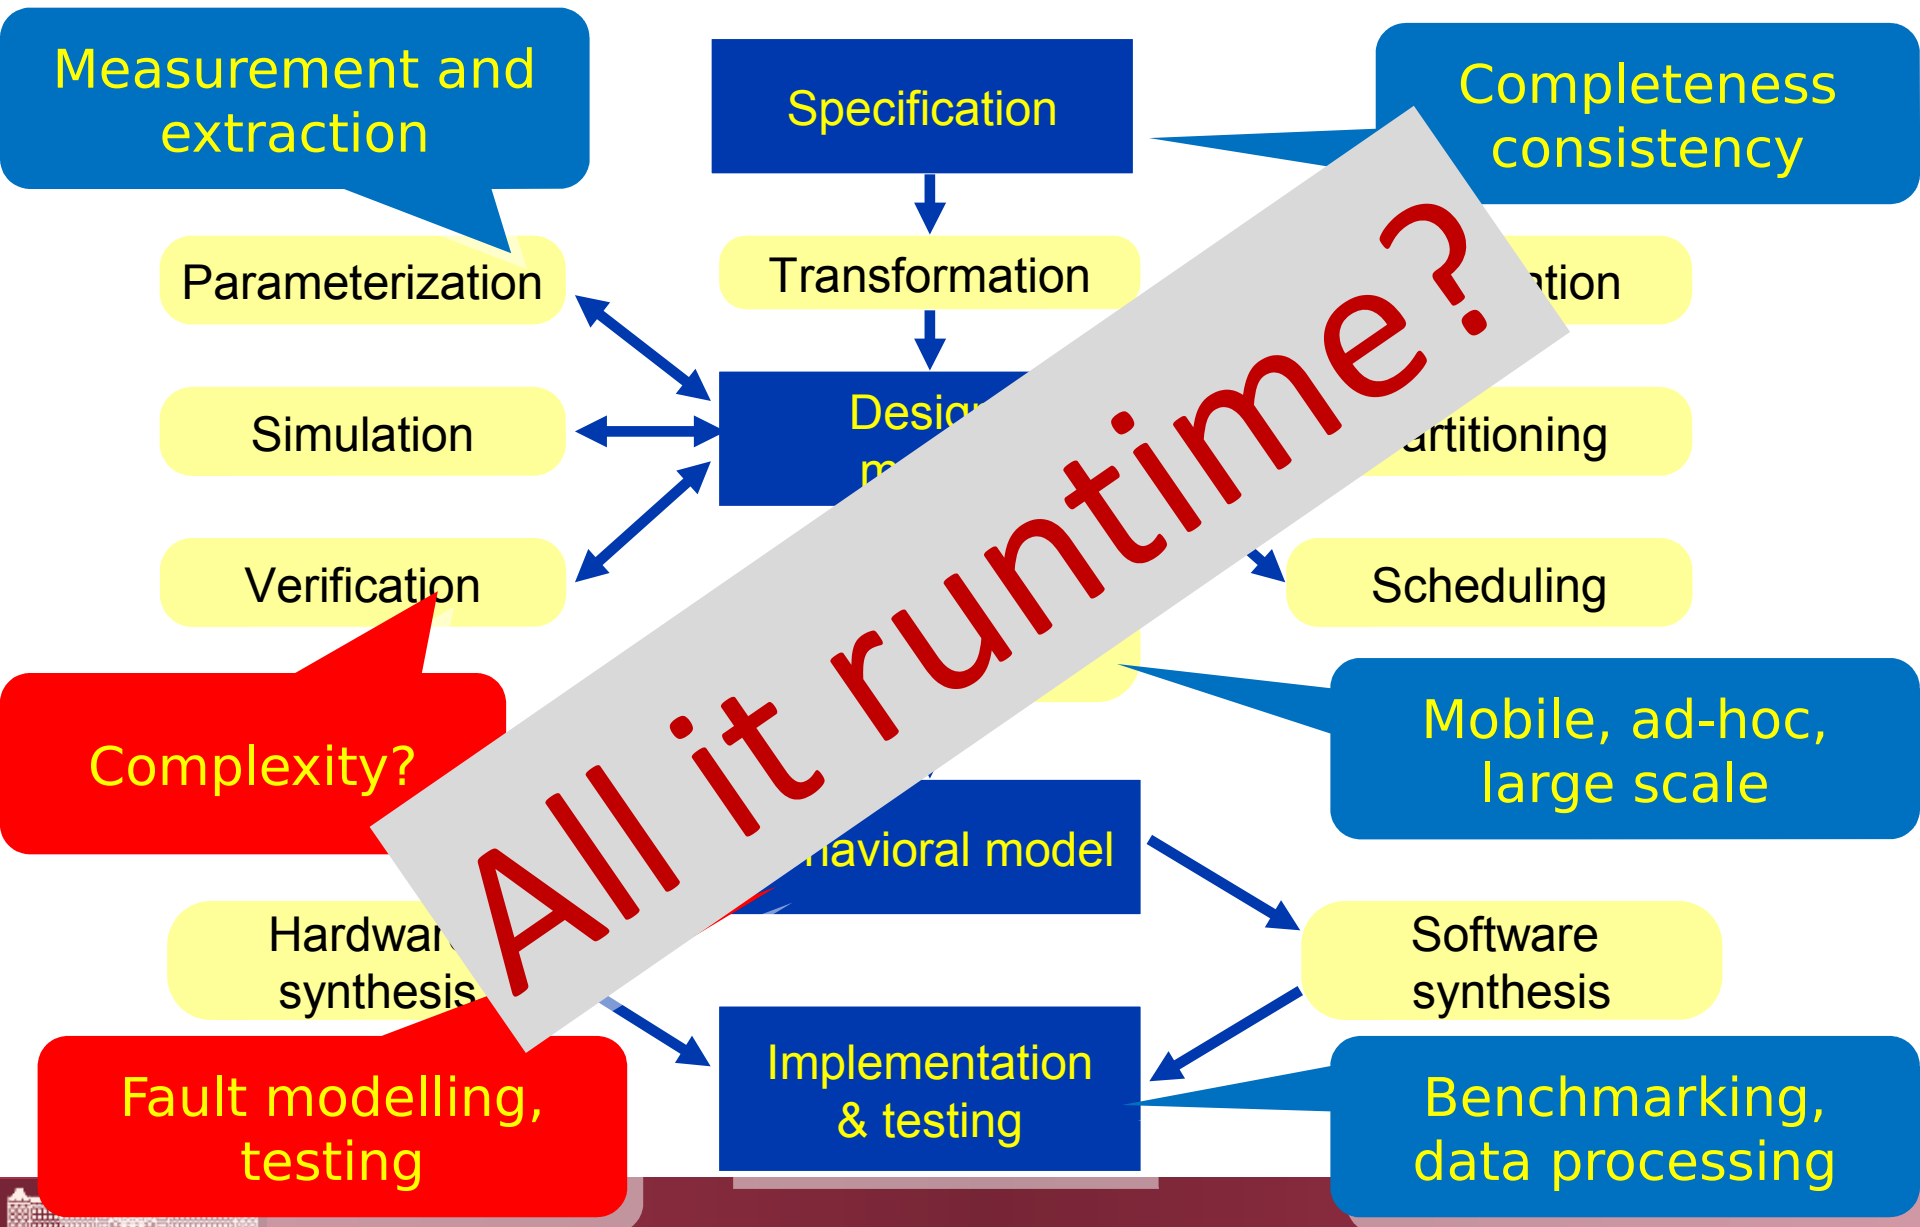

MDA for iot

Solving complexity problems needs **MDA**

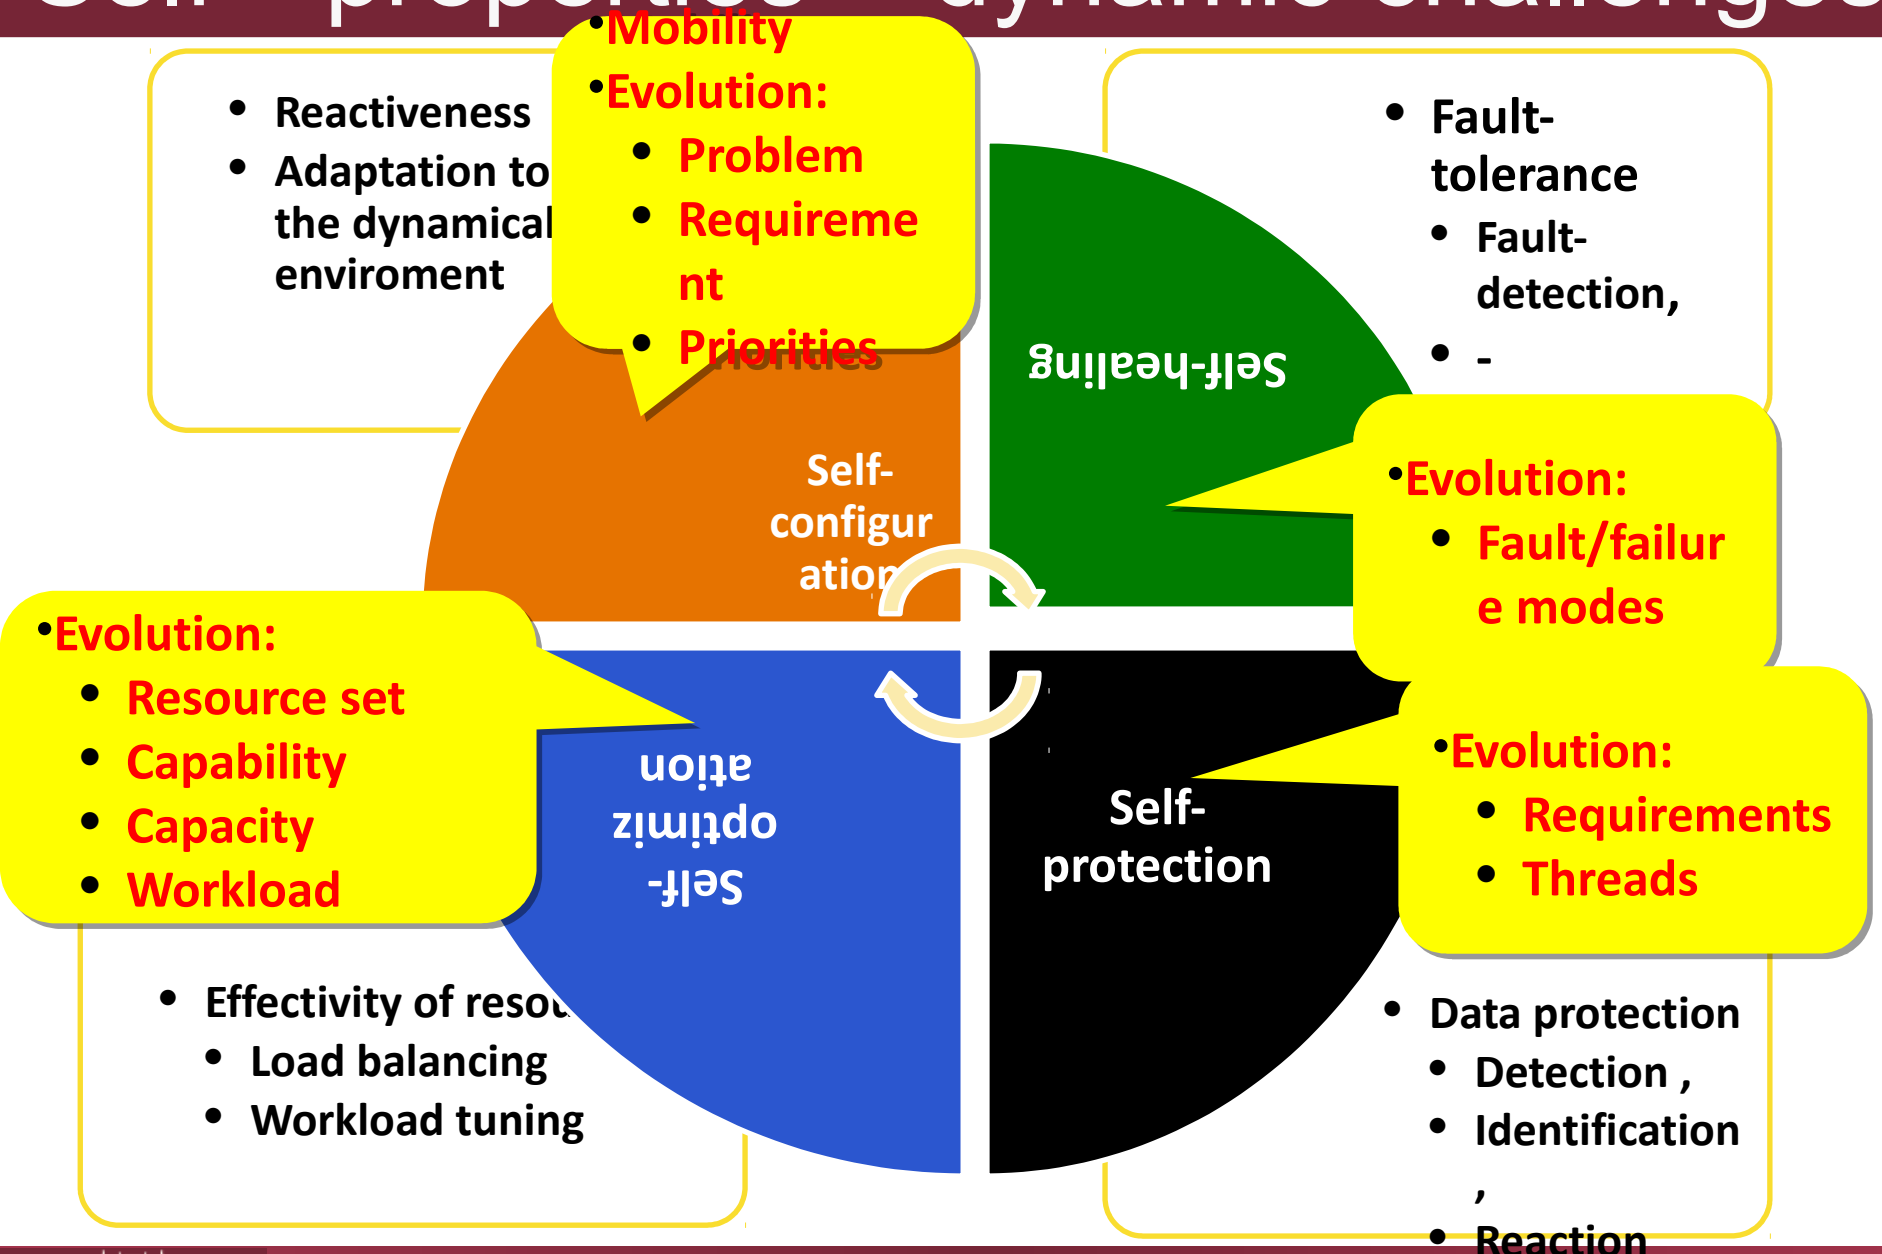

Models in the IoT

Critical IoT system design and challenges

Self-* properties – dynamic challenges

MDA for CPS

Assurance of the correctness of transformations?

Incremental model transformations

🐼 Key usage scenario for MT:

Intramodel manipulation

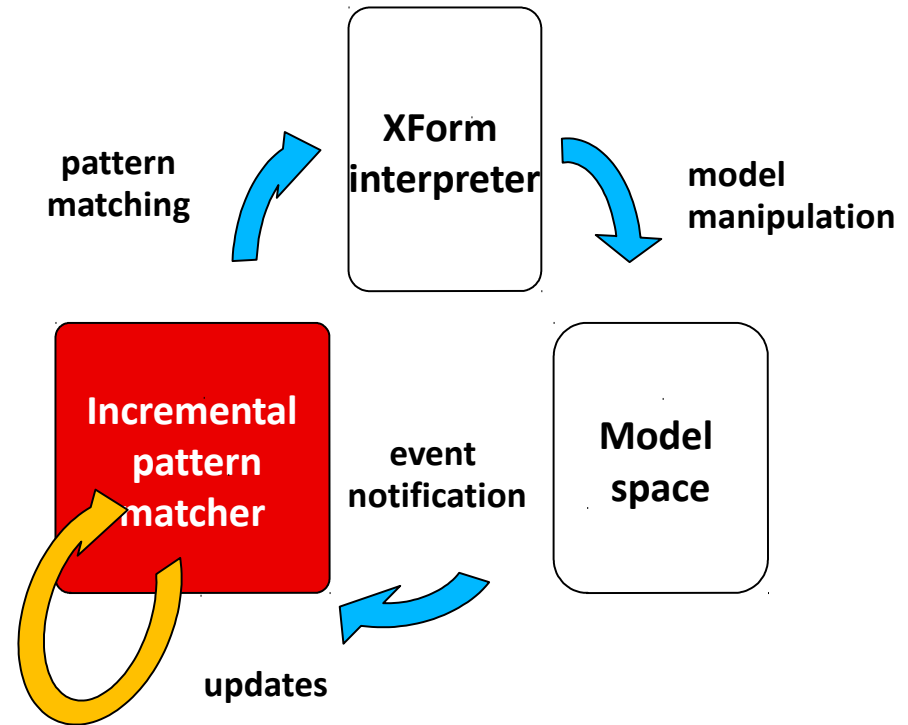

- Model execution
- Validity checking

🐼 **Evolving** models

- Problem: transformations are slow to (re-)execute

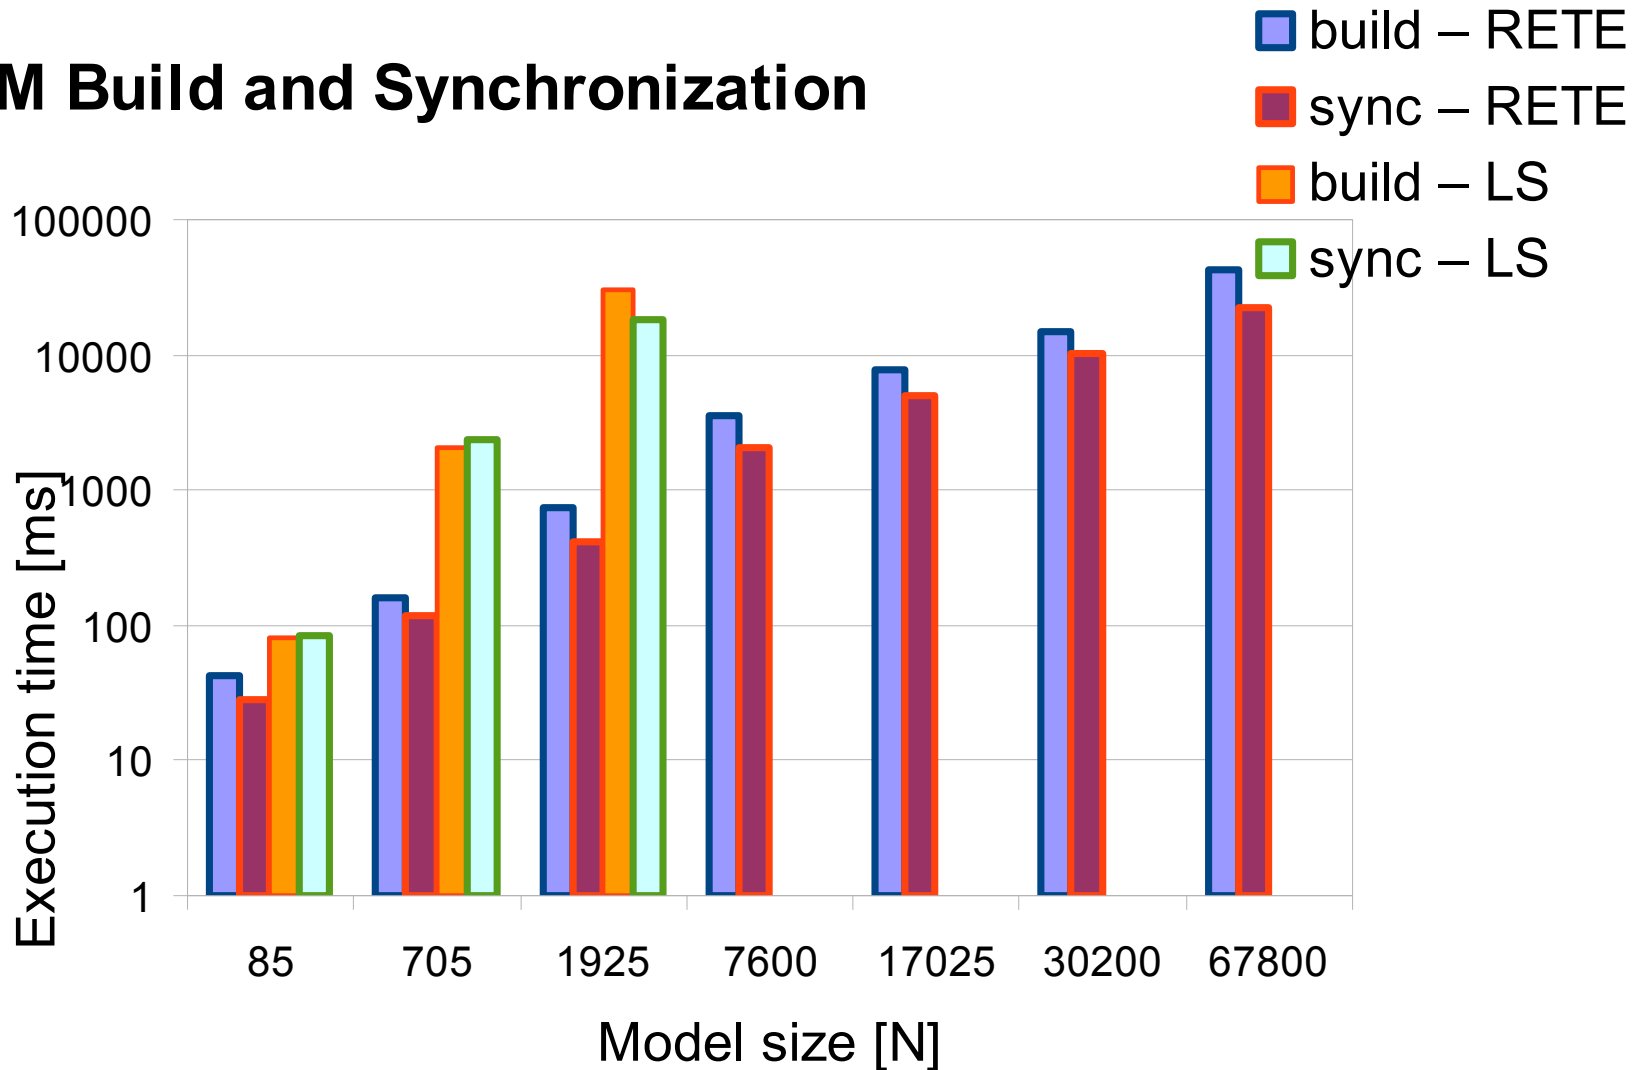

🐼 Solution: **incrementality**

- Map and apply the changes (but ONLY the changes) to the target model.
